

# Agile Quotation Tool - Premium

You have been asked to quote on a product. What should you do... Of course there are spreadsheets.

But “Agile Quotation Tool – Premium” is available to make your life so much easier. No need to remember where the relevant quote is stored or having to email it out to everyone. Anyone can come back and access AQT as needed.

“Agile Quotation Tool” (AQT) enables consistent estimates based on using an agile approach. AQT Premium supports small, medium and Large sized projects, so you can quickly and easily create a quotation for a small project or build a more detail quotation for a medium or large project. AQT supports roadmaps / scenarios for large projects, supporting up to 4 releases with the ability to create multiple teams.

The Premium subscription provides:

- Ability to create estimates / quotes for small, medium and Large sized projects, quickly and easily
- Support of 5 agile phases per quotation
- Detail scope and deliverables
- Phases can be renamed to allow tailoring to the agile approach being used
- Risks along with the ability to view them in a Risk Matrix
- Ability to set the percentage of CAPEX and OPEX per agile phase.
- Provide a list of Resources and T-Shirt size on the effort which can be updated to suit your business
- The solution approach can be documented. All associated documentation or diagrams can be added as supporting artefacts
- An initial product backlog is created listing Features / Epics and Enablers of which can be exported.
- For medium or large sized projects, each requirement is associated with a level of risk which is used to determine an overall contingency
- Small projects only need the requirements / tasks listed and total story points. When creating medium sized projects, the individual requirement is sized
- For Large projects, each requirement is associated to a scenario (Must, Should Could Nice) and this is used to build the product roadmap
- Capability to T-shirt size the requirements to determine agile team velocities and number of sprints required to build the product
- The ability to create a specific agile team as needed per agile phase
- The ability to factor in external costs needed per phase
- External Resource costs per individual or even whole external teams. A start date, length of time and cost can be added
- Capability to print an overview quote including : - Scope, Timeline; Financial Investment; Deliverables and agile phase
- Ability to purchase additional quotes and users above those supplied as part of your premium subscription
